Acuity Market Intelligence is an emerging technology strategy and research consultancy with a proven record of accurately anticipating biometric and associated identification solutions market trends.

Markets	Identification Solutions, Biometrics, Authentication
Services	Market Analysis & Strategic Planning Opportunity Assessment & Analysis Technology Adoption & Deployment Evaluations
Clients	Vendors, Solution Providers, Integrators, Investors, End Users

Context

How Will the Iris Recognition Market Evolve Through 2020?

“Over the next 10 years the infrastructure to enable mainstream, ubiquitous biometric authentication will be developed. Biometrics will be a critical embedded component of the digital world, as it becomes a key enabler of trusted transaction control – data access and flow - for both personal and commercial use. This secure transaction capability will ultimately define the genuine opportunity for revenue associated with deployment of biometric technologies. The technology itself will, in many respects, become inconsequential as the applications it delivers become essential components of 21st century life. ”

Iris Transformation Drivers

Mass Public Deployment

- ☞ Emergence of Asia Pacific
 - Hygiene Concerns
- ☞ “Do Nothing” Biometrics
 - No User Positioning
 - No User Action
- ☞ Changing Nature of Requirements
 - Application Domains
 - Personal
 - Public/Commercial
 - Civil/LE
- ☞ Transactions

Iris Transformation Drivers

Biometric Modality Evolution

- ☞ AFIS – low cost, ubiquitous criminal/civil ID
- ☞ Finger – freebie embedded in personal devices
- ☞ Face – across application domains, limited targeted purposes
- ☞ Signature – public/commercial contracts
- ☞ Voice – personal and public commercial phone based transactions
- ☞ Vein – touchless prevails for public/commercial applications where active user involvement desired
- ☞ Hand – fades away
- ☞ Iris – public/commercial touchless, “do nothing”

Bridging the "Human-Machine Identity Gap"

<p>Market Requirements</p> <ul style="list-style-type: none"> ☞ Embedded ☞ Low Cost/High Performance ☞ Built in Extensible Security ☞ No/Low user Impact ☞ Hygienic, Non Invasive ☞ 100% Solution 	<p>Technology Capabilities</p> <ul style="list-style-type: none"> ☞ Flexible Form Factors ☞ Distance Capture ☞ Subject Finding ☞ Surveillance ☞ Environment Tolerant
<p>Total Solutions</p> <ul style="list-style-type: none"> ☞ Operating Environment Crafted ☞ Human Factors Considerations ☞ Ease of Enrollment ☞ Legal, Regulatory ☞ Privacy/Civil Liberty Protection 	<p>Business Models</p> <ul style="list-style-type: none"> ☞ Transactions <ul style="list-style-type: none"> ● Information & Financial ● Personal, Commercial, & eGovernment ☞ Service Based

Perspective

Driving the Future

A confluence of factors including the emerging central role of the Digital Identity in IT, population mobility and workforce decentralization, demand for eGovernment services, near ubiquitous reliance on digital transactions, and the inevitability of broadband access everywhere will require a level of authentication available only through the use of biometrics.

The entry of sophisticated, well funded market players with technology expertise in high resolution image capture, large scale data management and high speed processing, and pattern recognition and matching algorithms from varied fields such as robotics, astronomy, and intelligent video elevate technological capability and provide the requisite knowledge for the industry to leverage this opportunity and experience sustained growth.

Iris based access, identity, and surveillance applications will become integral to a range of solutions including border control, government ID programs, ATM usage and facilities, information and transactions security at nuclear and chemical plants, top secret military and intelligence facilities, and major financial institutions. Iris recognition will become a preferred method of authentication for two primary reasons. Capture technology will become increasingly more sophisticated operating accurately regardless of environmental conditions. Biometric authentication that does not require the user to “do anything” e.g. position themselves in relation to or have physical contact with a reader, will be prove safer (no transmission of germs) and more convenient for users.
